AES '06 MEDIA ALERT

**NHT Pro AUDIO TO DEMO TWO NEW SUBS
SET TO SHIP IN JANUARY '07**

-- S-20 and S-80Xd Represent New Highs in Sonic Lows --

What: NHT Pro Audio will demonstrate the DEQX Calibrated **S-80Xd** subwoofer along with the long-rumored **S-20** sub at the upcoming AES Convention in San Francisco.

The long-awaited **S-20** subwoofer, which will be used in conjunction with the M-00 and M-20 monitors, is the official replacement for both the revered S-00 ("soo") and B-20 subs. The S-20 features the popular footswitch bypass and internal high and low-pass filters of its predecessors (not to mention their compact proportions) while adding more traditional single box LFE integration and additional output.

And if you *really* wanna rumble, NHT's most potent subwoofer ever, the **S-80 Xd**, features two (2) 12" woofers mounted back-to-back to reduce distortion and eliminate the need for cones or spikes. A gargantuan 500 Watt Class D amplifier features only a single (and simple) level control, leaving the complex crossover functions to the NHT engineers via the XdA amplifier/processor, where they belong. Looking ahead to the future, all is well (at least for buyers of the S-80Xd subwoofer), thanks to the inclusion of a USB port for easy upgrades of optional application filter sets.

When: October 6 – 8, 2006

Where: Moscone Convention Center, San Francisco, CA – Booth # 1416

R.S.V.P.: For additional information and scheduled demonstrations, please contact Adam Sohmer, SOHMER ASSOCIATES, LLC; 718-499-9161 (voice/fax), 347-512-0066 (mobile); adam@sohmerassoc.com.
